

Green Economy London Membership Information Sheet

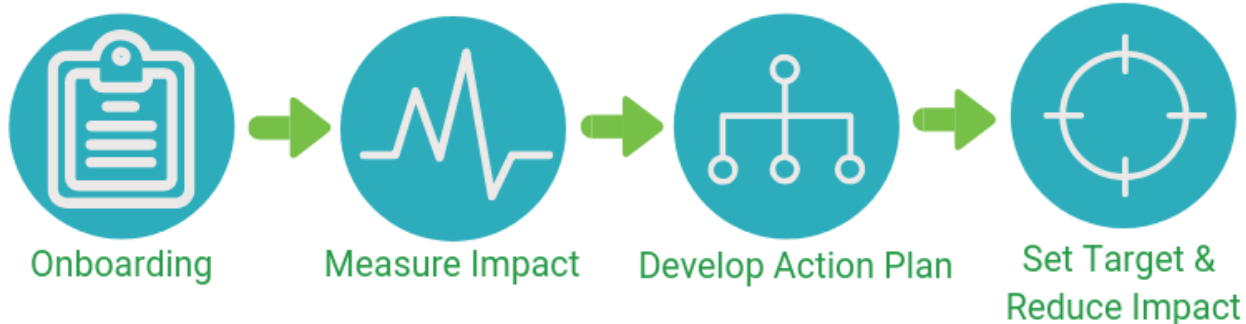

Green Economy London supports a network of businesses to set and achieve sustainability targets. The Hub brings together, empowers, and celebrates businesses as they achieve their sustainability goals.

As a result of implementing sustainable change, local businesses experience benefits including decreased operation costs; decreased risk (in the face of upcoming legislation for example); increased employee engagement; improved environmental outcomes; retention and talent attraction; and improved public image and brand value.

The Green Economy Canada Network has reduced over 59,000 tonnes of GHG emissions and collectively committed to reducing over 100,000 tonnes of GHG emissions. In 2017 the Green Economy Leaders collectively reduced their electricity usage by 310,715,377 kWh. This model has shown businesses can improve their bottom line while doing good for the environment.

Members of the local business and organizational community join their local Hub, pay an annual membership fee, and move through a series of steps to set a target and reduce their environmental impact while receiving support from their Hub through four key milestones:

Green Economy London Member Milestones

Our team can help your business reach their sustainability goals.
